CLASSIFIED INDEX
to the
CURRENT LIST OF MEDICAL LITERATURE

It is recognized that no classification can ever be devised which will satisfy perfectly the needs of everyone. Compromises have to be accepted and decisions on doubtful points can rarely be made definitely and finally. There are so many uncertain cases in connection with the subject classification of medicine that the attempt to achieve a permanent formula may even be considered futile. It is believed, however, for reasons which have been stated on previous occasions, that an imperfect classification has great advantage over the usual alphabetical index which separates so widely, under the greatest variety of names, references to the same condition, organ, disease, or other subject matter.

There is a point in this connection which so far has not been mentioned and which is of particular importance in the present situation. That is, the possibility of a division of the work by enlisting the aid of persons with special knowledge in particular fields.

The amount of published work in medical research is so vast, that even if one person is able to keep abreast of the developments in its various fields, the labor involved in properly indexing the sixty or more thousand titles per year is about the limit of what one individual unaided can do.

It is expected that in the preparation of future indexes of the Current List, the collaboration of persons specially qualified in several fields of medicine will be sought. It is planned, for example, that the references pertaining to dentistry will be indexed by a person directly engaged in literature searches in this field. The references to tumors, including cancer, will be indexed by a specialist in this field of research. It is hoped that this plan can be extended gradually and that each of these separate parts of the complete index to the Current List can be made in the way best suited to the needs of the specialists in these several fields of medicine.

As has been mentioned on many occasions, the Current List is intended as a cooperative undertaking and it is hoped that all who use it will feel a certain responsibility in contributing to its improvement. Suggestions and criticisms are particularly desired in connection with the index. It is realized that the value of the innovations which are being tried, can be determined only after repeated use by many persons. The test is the completeness with which are revealed the sources of the original work on particular subjects. Making available the accumulated knowledge in specific cases to those who can use it for the advancement of medicine, is the goal, and its achievement will be worth the cost of the effort.

INDEX

SULFAPYRIDINE

intraperitoneal administration 738.2
 kidney (renal) complications 53.1, 240.3,
 557.6, 566.3, 620.1
 medication by chewing with paraffin base
 294.3
 reactions following treatment with 455.4,
 566.3, 665.7, 984.5
 sodium salts of, clinical use by hypoderm-
 olysis 254.7
SULFAGUANIDINE (sulfamylguanidine) 18.6
 blood concentration of after administration
 in different ways 149.6
 dysentery treatment with 73.7, 254.4, 295.7,
 344.1, 451.3, 498.7, 544.3, 603.5, 666.6,
